

Spark Group

Disclosure on Carbon Footprint

At Spark Group, we are committed to minimizing our environmental impact and embracing sustainable practices. As part of our commitment to environmental stewardship, we recognize the significance of our carbon footprint and its implications on climate change. This disclosure aims to provide transparency about our carbon footprint and the measures we are taking to mitigate it.

1. Carbon Footprint Calculation:

We have conducted a comprehensive assessment of our carbon footprint to determine the total amount of greenhouse gas emissions produced directly or indirectly as a result of our operations. Our carbon footprint encompasses Scope 1 (direct emissions from owned or controlled sources), Scope 2 (indirect emissions from purchased electricity, heating, and cooling), and, if applicable, Scope 3 (indirect emissions from activities not owned or controlled by us, such as supply chain or business travel).

2. Greenhouse Gas Emissions Breakdown:

We have analyzed and categorized the sources of our greenhouse gas emissions, identifying the main contributors to our carbon footprint. This breakdown helps us prioritize our efforts to reduce emissions effectively.

3. Emission Reduction Targets:

In alignment with international climate goals and best practices, we have set specific and measurable targets to reduce our carbon footprint over time. These targets reflect our dedication to playing a role in limiting global temperature rise and fostering a low-carbon future.

4. Mitigation Strategies:

To achieve our emission reduction targets, we have implemented a range of mitigation strategies. These strategies may include, but are not limited to:

- Investing in renewable energy sources to power our operations.
- Enhancing energy efficiency across our facilities and processes.
- Optimizing transportation and logistics to reduce emissions.
- Encouraging employees to adopt eco-friendly practices at work and home.
- Collaborating with suppliers to promote sustainable sourcing and transportation.

- Conducting regular assessments and audits to identify further opportunities for improvement.

5. Carbon Offset Initiatives:

While striving to reduce our carbon footprint internally, we also acknowledge that some emissions are difficult to eliminate entirely. To offset these emissions, we are exploring partnerships with reputable carbon offset projects that align with our values and contribute to environmental conservation.

6. Reporting and Accountability:

We are committed to reporting our carbon footprint and progress toward emission reduction targets regularly and transparently. This accountability helps us track our performance and make necessary adjustments to achieve our sustainability objectives.

7. Stakeholder Engagement:

We actively engage with our stakeholders, including customers, employees, investors, and the community, to raise awareness of our carbon footprint and foster a culture of sustainability. We welcome feedback and suggestions from our stakeholders as we collectively work towards a more sustainable future.

Conclusion:

As a responsible corporate citizen, we understand the importance of addressing our carbon footprint to safeguard the planet for future generations. This disclosure represents our commitment to transparency and continuous improvement in minimizing our environmental impact. We recognize that this is an ongoing journey, and we remain dedicated to exploring innovative solutions and best practices to reduce our carbon footprint further.

Together, we can make a positive difference and create a sustainable world for all.
